Dot .Net Core and Progressive Web Application Practical

Practical – I

Roll No: T018	Name: Sachin Ramesh Mehta
Class: TYIT	Batch: 1
Date of Assignment: 09/07/2026	Date/Time of Submission: 09/07/2026

PART – A

Write the program for the following:

- a. Create an MVC application to perform basic Arithmetic Operations.

Code :-

Modelmvc.cs

```
namespace MVCAdd.Models
{
    public class AddModel
    {
        public int A { get; set; }
        public int B { get; set; }
        public int Result { get; set; }
    }
}
```

Index.cshtml

```
model MVCAdd.Models.AddModel
```

```
<h2>Add Two Numbers</h2>
```

```
@using (Html.BeginForm())
{
    @Html.TextBoxFor(m => m.A)
    <br />
    <br />

    @Html.TextBoxFor(m => m.B)
    <br />
    <br />
}
```

```
<input type="submit" value="Add" />
<br />
<br />
```

```
@if (Model != null)
{
    <b>Result = @Model.Result</b>
}
}
```

HomeController.cs

```
using Microsoft.AspNetCore.Mvc;
using MVCAdd.Models;
using System.Web;
```

```
namespace MVCAdd.Controllers
{
    public class HomeController : Controller
    {
        public ActionResult Index()
        {
            return View(new AddModel());
        }

        [HttpPost]
        public ActionResult Index(AddModel m)
        {
            m.Result = m.A + m.B;
            return View(m);
        }
    }
}
```

Output :-

MVCAdd Home Privacy

Add Two Numbers

Result = 37

b. Create an application to print Floyd's triangle till n rows in C#.

Code :-

using System;

```
class Floyd
{
    static void Main(string[] args)
    {
        int count = 1;

        for (int i = 0; i < 5; i++)
        {
            for (int j = 0; j <= i; j++)
            {
                Console.Write(count + " ");
                count++;
            }
            Console.WriteLine();
        }
        Console.WriteLine("Sachin Ramesh Mehta");
    }
}
```

Output :-

```
1
2 3
4 5 6
7 8 9 10
11 12 13 14 15
Sachin Ramesh Mehta
```

c. Write C# code to arrange the name of cities in sorted order. Accept name of 10 cities from the user

Code :-

```
using System;
class fylod
{
    static void Main()
    {
        string[] city = new string[5];
        Console.WriteLine("Sachin Ramesh Mehta");
        for (int i = 0; i < 5; i++)
        {
            Console.Write("Enter city name: ");
            city[i] = Console.ReadLine();
        }
        city.Sort();
        Console.WriteLine("-----sorted-----");
        for (int i = 0; i < city.Length; i++)
        {
            Console.WriteLine(city[i]);
        }
    }
}
```

Output :-

A screenshot of a terminal window showing the execution of the C# program. The output is as follows:

```
Sachin Ramesh Mehta
Enter city name: Mumbai
Enter city name: Pune
Enter city name: Patna
Enter city name: Thane
Enter city name: Palghar
-----sorted-----
Mumbai
Palghar
Patna
Pune
Thane
```
